ENT103TC Week 6 Codebook

Decision question: Should our app focus first on QR code traceability and supply chain analytics, or should we spend our main effort on adding real-time factory video to show food safety?

This version is written in a simple student style and follows the Week 6 open-coding task.

Three Source Documents

Badia-Melis, R., Mishra, P., & Ruiz-Garcia, L. (2015). Food traceability: New trends and recent advances. A review. Food Control, 57, 393-401. https://doi.org/10.1016/j.foodcont.2015.05.005

World Economic Forum. (2019). Innovation with a purpose: Improving traceability in food value chains through technology innovations. https://www.weforum.org/reports/innovation-with-a-purpose-improving-traceability-in-food-value-chains-through-technology-innovations/

Wang, E. S.-T., Lin, H.-C., & Tsai, M.-C. (2021). Effect of institutional trust on consumers' health and safety perceptions and repurchase intention for traceable fresh food. Foods, 10(12), 2898. https://doi.org/10.3390/foods10122898

Codes

Source	Excerpt / idea	Code	Short meaning	Merged pattern
Badia-Melis et al. (2015)	records need to connect across the chain	information_flow_gap	Traceability is weak when data is separated and hard to connect.	Pattern 2
Badia-Melis et al. (2015)	fast access matters during recalls	quick_traceback	A useful system should help people find source information quickly.	Pattern 2
Badia-Melis et al. (2015)	technology should be practical to use	practical_adoption	Even good tools fail if they are too hard or expensive to use.	Pattern 3

World Economic Forum (2019)	technology only helps when standards are shared	harmonised_standards	Companies need shared rules and formats to make traceability work.	Pattern 3
World Economic Forum (2019)	full chain visibility creates value	end_to_end_visibility	Traceability becomes stronger when different stages are linked together.	Pattern 2
World Economic Forum (2019)	rollout needs infrastructure and training	implementation_support	The business still needs systems, training, and support behind the feature.	Pattern 3
Wang et al. (2021)	people trust traceable food more when institutions are reliable	institutional_trust	Trusted organisations make traceability information feel more believable.	Pattern 1
Wang et al. (2021)	producer trust affects safety feelings	producer_trust	Consumers care about who produced the food, not only the label itself.	Pattern 1
Wang et al. (2021)	trust increases buying intention	repurchase_intention	When trust is higher, people are more willing to buy again.	Pattern 1

Patterns

Pattern 1: People trust food information more when it is clear, traceable, and backed by reliable organisations.

Pattern 2: A good transparency system needs connected data from different stages of the supply chain, not just one attractive front-end feature.

Pattern 3: New tools sound useful, but they only work well when the company also has standards, governance, and enough technical support.

Insights

Insight 1: The repeated idea in all three sources is that trust comes from evidence people can check, so QR records, batch links, and inspection data are stronger than just showing a video screen.

Insight 2: The main conflict is that live video looks impressive to users, but it may not actually prove much if the upstream data, certifications, and shipment records are still weak.

Insight 3: Our current project direction already matches the research better because we are building multi-tier traceability, risk scoring, and forecasting, which gives more useful proof than a single visibility feature.
